JOURNEY MAP AREA	Request Laptop	2. Enter Details	3. Automated Validation	4. Approval	5. Procurement	6. Fulfillment	7. Confirmation
What happens / Incidents	Employee opens IT procurement portal and enters Standard Laptop.	User enters department, employee details, business need and delivery location.	Flow checks required fields, eligibility, budget/cost center and standard configuration.	Request is routed automatically to the appropriate manager / IT approver.	Approved request creates a procurement/order record and notifies the purchasing team.	Laptop is prepared, assigned, shipped or handed over to the employee.	Employee receives status updates and confirms receipt.
Digital touchpoints / Channels	Employee • IT portal • Laptop ordering	Employee • Request form • HR/asset data	Automation/Flow • Policy rules • Budget data	Manager • IT approver • Approval notification	Procurement team • Purchase/order record • Vendor	IT support • Asset team • Delivery/counter	Employee • IT portal • Email/notification
Positive moments	Easy access to a standard laptop system.	Simple form with predefined choices.	Fast validator without manual checking.	Clear approval status and less waiting.	Order details are generated consistently.	Tracking gives visibility into delivery.	Quick confirmation and completed request.
Negative moments / How things can go wrong	Have to wait for the laptop to be delivered to the office.	Too many fields can cause errors.	Missing or incorrect data can stop the flow.	Approval delays can block procurement.	Manual re-entry may create duplicate work.	Delivery or asset assignment can be delayed.	User may not know whether the request is closed.
Goals & motivations	Help me request the correct laptop quickly.	Help me complete the request without confusion.	Help me avoid rejected or incomplete requests.	Help me get approval with minimal delay.	Help IT procure the right device accurately.	Help me receive and start using the laptop.	Help me know the request is fully completed.
Areas of opportunity	Recommend the standard laptop automatically.	Use dropdowns and auto-filled employee data.	Add automated eligibility and policy checks.	Use automatic approval routing and reminders.	Generate purchase/order records automatically.	Provide tracking and asset assignment updates.	Send automatic completion and receipt confirmation.

Automation outcome: A standard laptop request moves from employee submission → automated validation → approval → procurement → fulfillment → confirmation, reducing manual effort, errors and unnecessary waiting.
